

TaylorCraft Homes High Tech Features

Home Security

24 hour monitoring sends police, fire and EMS teams when you are unable to call for yourself.

Structured Wiring and Outlets

A structured wiring system is a superior form of traditional home wiring and the most sophisticated way to distribute incoming technology services in your new home. Professionals will design and install your home's structured wiring and outlet arrangement to meet your needs. Combine phone, cable and data connections into one outlet. Or break out each port separately to locate them where they are convenient for you.

Home Network, Office and Entertainment

This enables multiple computers and family members to share one common Internet connection among computers throughout your TaylorCraft home.

Distributed Audio

Built-in audio means no more ugly wires. You can enjoy the same fine sound produced by one room's stereo equipment throughout your entire home.

Surround Sound System

With the right speakers and components, you can enjoy an amazing home theater experience. A state-of-the-art audio and video system is a valuable asset, but even more when it blends seamlessly into your home's architecture.

Plasma, LCD TVs and Accessories

The right TV and accessories put your family in the center of current events, movies, sports, performances. ...wherever and whenever you want to go.

Whole House Communication and Observation Systems

Home intercom systems allow you to relay messages easily throughout your TaylorCraft home, place a call directly to any individual room, or talk to multiple locations at once. You will also be able to talk with visitors at your front door. An observation system includes one or more strategically placed cameras that allow you to monitor activities from an LCD screen.

Central Vacuum System

Get maximum cleaning power throughout your home. Well placed vacuum inlets and lightweight attachments give you the ability to connect and clean any room easily.
